

Winterizing Your Sprinklers

1. Using a 5 ft long Sprinkler Valve Key turn your stop and waste valve 90 degrees.

(This valve will only turn one way)

Remove both lids. This box is the stop and waste valve and is located in your yard

2. Back Flow Valve

If you open the hose bib it will allow air into the system to slowly drain over time.

Using a flat head screwdriver turn both of these notches 90 degrees. This will allow water to drip out of the valves.

3. Unscrew any hoses from hose bibs attached to the house.

4. Once hoses are unscrewed turn on hose bibs and allow water to run for a few seconds

5. You can also run through one manual sprinkler cycle to push any excess water
